SUMMARY

Engineer building agentic AI systems in Python.

TECHNICAL SKILLS

Python, FastAPI, LangGraph, LangChain, PostgreSQL, Redis, Docker, GCP, Git

PROJECTS

Multi-Agent Support Copilot | Python, LangGraph, FastAPI, PostgreSQL, Redis

- Built a LangGraph multi-agent workflow (planner, retriever, executor) with tool calling against order and refund APIs
- Implemented hybrid search with pgvector embeddings and re-ranking over 40k support tickets
- Persisted agent state with PostgreSQL checkpoints; Redis caching cut p95 latency from 4.1s to 1.3s
- Added an evaluation pipeline with RAGAS and a 200-question golden set that runs in GitHub Actions
- Async FastAPI service with retries, timeouts and structured logging; deployed on GCP Cloud Run using Docker

Text-to-SQL Agent | Python, LangChain, PostgreSQL

- Built an SQL agent with tool calling that answers analytics questions over a PostgreSQL warehouse
- Added guardrails that validate generated SQL against the schema and block write queries
- Logged every agent step for observability and replayed failures in an evaluation set

EXPERIENCE

AI Engineering Intern, Finlytics | May 2025 – Aug 2025

- Built a RAG pipeline in Python over 8k policy documents using LangChain and FAISS
- Added Redis caching and retries with exponential backoff for LLM calls, cutting cost by 30%
- Wrote pytest unit and integration tests for the retrieval layer

EDUCATION

B.Tech Computer Science, Example Institute of Technology | 2022 – 2026 | CGPA 7.8
